

- **Create structure.** Gifted children need - and crave - structure. A great way to start creating a sense of structure is teaching them the fundamentals of time management. It can be as simple as starting with sequencing vocabulary, creating a list of weekly activities or using a planner.
- **Make it fun.** Children are determined and motivated when they are having fun and have an interest in the task at hand. For example, expand on homework, essays, and word problems by using visuals and incorporating the child's interests are great ways to keep them engaged.
- **Stay positive and promote proactivity.** Always reiterate the value and importance of education, along with the many benefits. It's important that the child understand how building a foundation now will help in the future. Every child thrives on positivity and attention, regardless of academic strength, so always take pride and express interest in the child's education.
